

Security Summary

External Report

Product name: IBM FileNet Content Manager

Product version: 5.5.10-IF001

Report date: Thu Mar 30 2023

Description: This is an external security transparency document.

Instructions: For more information about the document please refer to the following information page

Information Page
<https://ibm.biz/Bdfs2e>

Principle Of Least Privilege

Compliance

All Pods run with the Red Hat restricted security context constraint

All product containers specify an alphanumeric USER (non-root) in their Dockerfile or equivalent OCI build file for container images

No product containers use sudo

No product containers run as root

Host and Container Isolation

Compliance

Product containers do not target a host IP

Product containers do not specify a host port

Product containers do not specify a host path to mount file or directory from host node's filesystem

Host and Container Isolation

Compliance

Product containers do not enable host network access

Product containers do not share the host process ID namespace

Product containers do not share the host Inter Process Communication namespace

SSH/remote access to containers is disabled

Network Security and Protection

Compliance

Product does not allow anonymous access

Create Network Policies to restrict network traffic

Data Security

Compliance

Data encryption in transit is enabled by default using at least TLS 1.2

Application Observability

Compliance

Pods are able to be identified as belonging to a product
